Dear Friend:

I write to you out of a feeling of grave concern, which I believe you share. I am convinced that if the present bitterness continues to dominate international relations we face catastrophe.

We can not count on the prestige or strength of any single nation to bring about international stability. The power that one country possesses today, tomorrow will belong also to others. Industrial installations, however complex, can be duplicated; inventive ingenuity and economic resources can be exploited under other systems of government. So long as international relations are determined by rival national sovereignties, the threat of atomic war will remain.

We scientists believe that a clear and widespread understanding of the facts and implications of the atomic discoveries is indispensable to a reasonable public stand on questions of international politics. Given this understanding, men and women will recognize that only international cooperation through effective institutions can ensure security against humanity's destruction.

The enclosed article sets forth my beliefs as to the reasons for the stalemate which confronts us today in the vitally important negotiations on international atomic energy control. It proposes certain actions on the part of our people and our government which I think would be helpful in lessening the present tensions. Because each one of us must bear his share of the burden of this generation, I ask you to consider these suggestions, and to discuss them with your neighbors. Only through clear formulation and frank discussion of concrete proposals can men of good will in all countries help to achieve a solution.

Now still a little time remains for us to consider different paths leading to the establishment of a federation of nations in which men may develop and use their creative capacities to serve mankind. Each one of us can do his part by working to bring about responsible public action based on understanding of the present crisis. Through our campaign of public education on the simple facts of atomic energy and its social implications, we of the Emergency Committee of Atomic Scientists have pledged our utmost effort to this end. Friends have already subscribed nearly $400,000.00 of the one million dollars we need to carry out our minimum program. I ask you to help us in fulfilling our task.

Faithfully yours,

A Einstein
